1 Introduction

2 Usage

2.1 Options

The supported options are given as package options. Few options (e.g. verbose, enable, disable) can be changed after the package is loaded by the macro backrefsetup, e.g.:

```
\usepackage[verbose]{backref}
\backrefsetup{verbose=false}
```

This macro is available since version 2012/07/24 v1.37.

2.1.1 Options for type of back references

In short the following options set the type of back references. Default is option pageref.

ref section number
pageref page number
hyperref section number as hyper link
hyperpageref page number as hyper link

The options that start with hyper are intended for the use with package hyperref. In this case package backref will be loaded automatically if the hyperref options backref or pagebackref are given. Package hyperref then loads package backref with the appropriate option:

hyperref option	backref option set by hyperref
backref	hyperref
backref=section	hyperref
backref=slide	hyperref
backref=page	hyperpageref
pagebackref	hyperpageref

2.1.2 Language options

Currently supported options are english (american, australian, british, canadian, newzealand, UKenglish, USenglish), german (ngerman, austrian, naustrian), french (acadian, canadien, frenchb, francais), spanish, and brazil (brazilian). Default is english.

2.1.3 Other options

verbose: A message is written into the .aux file for each reference that is found for back citing.

enable, disable: If a citation should not be back cited, then the recording can be turned off by option disable and enabled again afterwards, e.g.:

\bookmarksetup{disable}\cite{...}\bookmarksetup{enable}

Both options are added in version 2012/07/24 v1.37.

2.2Detecting the end of a bibliography entry

Package backref has to be able to detect the end of an entry in the bibliography, therefore each \bibitem entry must be ended by an empty line (or a \par token).

Example:

\begin{thebibliography}{9} \bibitem[bib:abc] First entry.

\bibitem[bib:foo] Second entry.

\end{thebibliography}

Then package backref can automatically add hooks for the back references list at the end of the entries.

\backrefparscanfalse

Sometimes it is not appropriate if the entry is read as argument. For exam-\backrefparscantrue ple, catcode changes for verbatim stuff do not have the desired effect. Therefore the scan for the \par token can be disabled by \backrefparscanfalse before \bibitem and enabled by \backrefparscantrue afterwards.

\backrefprint

If the scan for the end of the entry is disabled, then package backref does not know where to put the back references list. The list is printed by the macro **\backrefprint**, thus just call it at the right place. Example:

2.3 Formatting of the back references list

The back references list is separated from the entry by \newblock, if the used bibliography package supports this. The package options control the kind of back references (page numbers, sections numbers), whereas the hooks control the formatting.

There are two hooks \backref and a new hook \backrefalt, available since version 1.21 of package backref. The former one is enabled by default.

2.3.1 Formatting hook \backref

Macro \backref has a comma separated list of backref references as first and only argument. With hyperref options only this list will be printed. Without hyperref there is an introductionary text, controlled by macros \backrefpagesname or \backrefsectionsname.

2.3.2 Formatting hook \backrefalt

\backrefalt is a new interface since version 1.21 of package **backref**. It takes four arguments:

- 1. Number of citations without dupes.
- 2. Back references list without dupes.
- 3. Number of all citations (with dupes).
- 4. Back reference list with all entries (with dupes).

The latter options consider equal entries as one entry. Now \backrefalt can easily be defined with text that depends on the number of citations, for example:

```
\usepackage[backref]{backref}
\renewcommand*{\backref}[1]{}% for backref < 1.33 necessary
\renewcommand*{\backrefalt}[4]{%
  \ifcase #1 %
    No citations.%
  \or
    One citation in section #2.%
  \else
    #1 citations in sections #2.%
  \fi
}</pre>
```

The separation between the list entries are controlled by the following macros:

- \backrefsep: inserted between entries except for the next cases, default is
 ", ".
- \backreftwosep: inserted between entries in a list of two entries, default is " and~".
- \backreflastsep: inserted between the last two entries of a list with more than two entries, default is ", and~".

Examples:

```
\langle entry1 \rangle
\langle entry1 \rangle \backreftwosep \langle entry2 \rangle
\langle entry1 \rangle \backrefsep \langle entry2 \rangle \backreflastsep \langle entry3 \rangle
```

Since version 1.33 it is not necessary to redefine pages , it is automatically disabled if defined.

2.3.3 Refinement \backrefentrycount

Since version 1.33 the entries of the distinct list of interface \backrefalt are wrapped in \backrefentrycount. The macro is called with two arguments. The first is the backref entry and the second one the citation count of this entry. As default the macro passes the first argument through and ignores the count argument. But it can be redefined, e.g.

```
\renewcommand*{\backrefalt}[4]{...}% see above
\renewcommand*{\backrefentrycount}[2]{%
  #1%
  \ifnum#2>1 %
        ~(#2)%
  \fi
```

In case of duplicates, the distinct entry is appended by the number of citations in parentheses.

3 The macros

Internal command names of this package start with \BR@, commands, that store the original meaning of commands, which will be redefined, are prefixed with \BRorg@.

3.1 Package identification

```
1 (*package)
```

3.2 Options

```
2 \RequirePackage{kvoptions} [2011/06/30]
3 \RequirePackage{kvsetkeys} [2009/07/30]
4 \RequirePackage{ltxcmds} [2009/12/12]
5 \SetupKeyvalOptions{%
6   family=backref,%
7   prefix=BR@,%
8 }
\backrefsetup
9 \newcommand*{\backrefsetup}{\kvsetkeys{backref}}}
```

3.2.1 Option verbose

If package hyperref is loaded, then its setting is used as default for the verbose switch.

```
10 \DeclareBoolOption[%
11 \ltx@ifundefined{ifHy@verbose}{%
12  false%
13  }{%
14  \ifx\ifHy@verbose\iftrue true\else false\fi
15  }%
16 ]{verbose}
```

3.2.2 Options for way of working

17 \long\def\page@backref#1#2#3{#1}
18 \long\def\section@backref#1#2#3{#2}

What is printed depends on how the 3 available items of information are used (page number, section number, label).

```
19 \lceil 19 \rceil \leq \lceil 19 \rceil
20 \long\def\hyper@page@backref#1#2#3{\hyperlink{page.#1}{#1}}
Now the options follows, that can be used without package hyperref.
21 \DeclareVoidOption{pageref}{%
    \def\backref{\backrefpagesname\ }%
    \let\backrefxxx\page@backref
23
24 }
25 \DeclareVoidOption{ref}{%
26
    \def\backref{\backrefsectionsname\ }%
27
    \let\backrefxxx\section@backref
Set up back-referencing to be hyper links, by page or section.
29 \DeclareVoidOption{hyperref}{%
    \def\backref{}\let\backrefxxx\hyper@section@backref
31 }
\def\backref{}\let\backrefxxx\hyper@page@backref
34 }
```

Recording the back references in the auxiliary file can be enabled and disabled by the following options.

```
35 \DeclareBoolOption[true] {enable}
36 \DeclareComplementaryOption{disable} {enable}
```

3.2.3 Language options

```
37 \def\backrefenglish{%
    \def\backrefpagesname{pages}%

3.4 Reading .brf file

\backcite The file \jobname.brf collects the back cite informations as calls of \backcite with the informations in the arguments.

The first argument of macro \backcite is the citation label, the second parameter contains the page number (\thepage), the current label of the citation (\@currentlabel), and the current anchor name (\@currentHref). Example for a citation at the first page in second section:

```
\backcite {bib:abc}{{1}{2}{section.2}}
```

While the file \jobname.brf is read, the informations are collected and stored in macros whose names are build by the citation label $\langle label \rangle$:

What are "dupes"? An instance: you have three references to an entry in the bibliography on the first page:

```
\backcite {bib:abc}{{1}{1}{section.1}}
\backcite {bib:abc}{{1}{1}{section.1}}
\backcite {bib:abc}{{1}{2}{section.2}}
```

Then the whole backref list with option pageref would print, e.g.:

```
Entry for bib:abc. Cited on pages 1, 1, 1.
```

Without dupes the entries with the same page number would be removed, e.g.:

```
Entry for bib:abc. Cited on page 1.
```

Also the third entry is removed, because it has the same page number. For the comparison only these pieces of information are considered that will be used later by \backrefxxx. With option pageref macro \backrefxxx becomes \page@backref that throws away the second and third argument and only uses the first argument with the page number. To be more precise, the first expansion of \backrefxxx is used in comparison. If some arguments are used here, but later omitted, then this will not be detected.

\backrefxxxdupe With option hyperref you will get two entries in the following example because the second entry differs in the link information, so the result will be the same section number, but as different links.

```
\backref {bib:abc}{{1}{1}{section.1}} \backref {bib:abc}{{1}{1}{equation.1}}
```

Macro \backrefxxxdupe will be used in the comparison test if it is defined. Thus you can provide a definition in this case as follows:

```
\newcommand*{\backrefxxxdupe}[3]{#2}
```

Then only the section number is interpreted, but not the anchor name.

To avoid same entries, it is checked before, whether the entry already exists. Only the information needed by **\backrefxxx** is compared.

```
211 \def\backcite#1#2{%
212
     \@for\x:=#1\do{%
213
       \begingroup
214
         \csname @safe@activestrue\endcsname

3.7 Rerun warning

\BR@RerunFileCheck The following code computes a MD5 sum and the file size of the .brf file at the begin and the end of the document and compares them. A rerun warning is given, if they do not match. This method requires pdfTEX or LuaTEX. The method fails, if the MD5 sum and the file size are the same for a changed .brf file (it's probably very seldom).

417 \RequirePackage{rerunfilecheck} [2009/12/10]
